Patient

Caretaker

Intended use and identification of characteristics related the safety of the medical device

Questions adapted from ISO/TR 24971:2020 Appendix A

No	Output in a	A multipolation	Commont	Indepartition of the conditions
No	Question	Applicable (Y/N/?)	Comment	Identified Hazard (see Worksheet Hazard Traceability column B)
1	What is the intended use and how is the medical device to be used?	Υ	The indended use is to move and fixate the foot in a certain extreme position relative to the lower leg for a short period of time. (see 1.3D Footplate Device Classification.pdf)	
2	Is the medical device intended to be implanted?	N		
3	Is the medical device intended to be in contact with the patient or	Υ	The foot and lower leg of the patient are in contact with the	Bacteria
	other persons?		3D Footplate	
4	What materials or components are utilized in the medical device or are used with, or are in contact with, the medical device?	Υ	Materials are compatible for skin contact	Inadequate performance of cleaning, disinfection or sterilization
5	Is energy delivered to or extracted from the patient?	Y	Load and displacement are offered to the patient's foot via the 3D Footplate by the medical professional in line with exertion of forces applied during manual clinical stress tests	bending/torsion
6	Are substances delivered to or extracted from the patient?	N		
7	Are biological materials processed by the medical device for	N		
	subsequent re-use, transfusion or transplantation?			
	Is the medical device supplied sterile or intended to be sterilized by the user, or are other microbiological controls applicable?	N		
	Is the medical device intended to be routinely cleaned and disinfected by the user?	Υ	The 3D Footplate should be cleaned for use with another patient	Inadequate performance of cleaning, disinfection or sterilization
	Does the medical device modify the patient environment?	N		
_	Are measurements taken?	N		
12	Is the medical device interpretative? Is the medical device intended for use in conjunction with other	N Y	The 3D Footplate was made compatible for imaging with	image artefacts
13	medical devices intended for use in conjunction with other medical devices, medicines or other medical technologies?	Y	radiography and CT-scanners	image artefacts
14	Are there unwanted outputs of energy or substances?	N	radiography and C1-scaillers	
15	Is the medical device susceptible to environmental influences?	N		
16	Does the medical device influence the environment?	N		
17	Does the medical device require consumables or accessories?	N		
18	Is maintenance or calibration necessary?	Υ	Maintenance is necessary to confirm correct friction fixation forces and replace broken parts	in-service requirements (e.g. maintenance, reprocessing)
19	Does the medical device contain software?	N		
20	Does the medical device allow access to information?	N		
21	Does the medical device store data critical to patient care?	N		
22	Does the medical device have a restricted shelf-life?	Υ	The fixation mechanism could deteriorate over time, and the lever of the clamp could break	Failure of a component due to ageing, wear or fatigue
	Are there any delayed or long-term use effects?	N		
24	To what mechanical forces will the medical device be subjected?	Y	Friction forces to keep the rods fixated in a certain position; recation forces generated by the foot and lower leg of patient to keep enforced position	tension
25	What determines the lifetime of the medical device?	Υ	Wear or ageing of materials, in particular, the fixation rod mechanism	Failure of a component due to ageing, wear or fatigue
26	Is the medical device intended for single use?	N		
27	Is safe decommissioning or disposal of the medical device necessary?	N		
28	Does installation or use of the medical device require special training or special skills?	Υ	The amount of load to postion the foot in an extreme position should be the same as when applied in a clinical stress test, which can only be applied by medical professional that are trained execution of these test. So the use of the 3D Footplate does not require additional training.	Use by unskilled or untrained personnel
	How will information for safety be provided?	Υ	Instructions ifor use	Confusing or missing instructions for use
	Are new manufacturing processes established or introduced?	N		
31	Is successful application of the medical device dependent on the usability of the user interface?	Y	Positioning the foot in an extreme position and thereby mimicking a clinical stress test is a critical performance measure to make use of this 3D Footplate	Use by unskilled or untrained personnel
31,1	Can the user interface design features contribute to use error?	Y	In first time use positioning of the foot or leg might be misunderstood, also the need to fixate all 6 rods might be missed.	Complex or confusing control system Ambiguous or unclear state of the medical 3D Footplate
31,2	Is the medical device used in an environment where distractions can cause use error?	N		·
	Does the medical device have connecting parts or accessories?	N		
	Does the medical device have a control interface?	N		
	Does the medical device display information?	N		
	Is the medical device controlled by a menu?	N	Backbackack for the control of the c	Handard (1997)
31,7	Is the successful use of the medical device dependent on a user's knowledge, skills and abilities?	Y	Positioning the foot in an extreme position and therby mimicking a clinical stress test is a critical performance measure to make use of this 3D Footplate	Use by unskilled or untrained personnel
31,8	Will the medical device be used by persons with special needs?	N	i '	

5.3D Footplate Hazard Traceability Matrix v1.1

32	Does the medical device include an alarm system?	N		
33	In what way(s) might the medical device be deliberately misused?	Υ		Confusing or missing instructions
			other body parts such as the wrist in the same 3D Footplate	for use
34	Is the medical device intended to be mobile or portable?	Y	The 3D Footplate can be taken in and out of the imaging	falling objects
			rooms	
35	Does the use of the medical device depend on essential performance?	Υ	Positioning the foot in an extreme position and thereby	Slips, lapses and mistakes
			mimicking a clinical stress test is a critical performance	
			measure to make use of this 3D Footplate	
36	Does the medical device have a degree of autonomy?	N		
37	Does the medical device produce an output that is used as an input in	N		
	determining clinical action?
